

Business Partner Analysis with “*Magist*” by Eniac

- I. Is Magist a good partner for our high-end tech products?
- II. Are their deliveries fast enough?

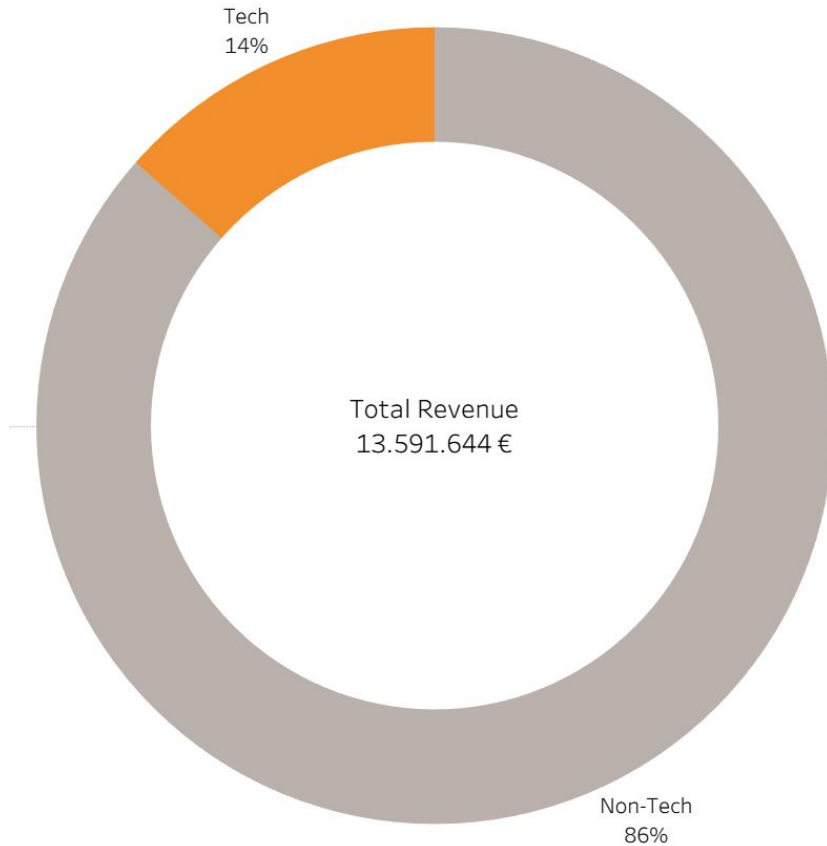

Is Magist a good business partner for us?

Based on our research, we recommend a reassessment in 6 months for the partnership, based the following points:

- Magist **does not have a big market for expensive tech products** right now
- **Delivery reliability remains a potential operational risk** because delayed orders experience substantial delays.

Revenue Tech vs Non-Tech

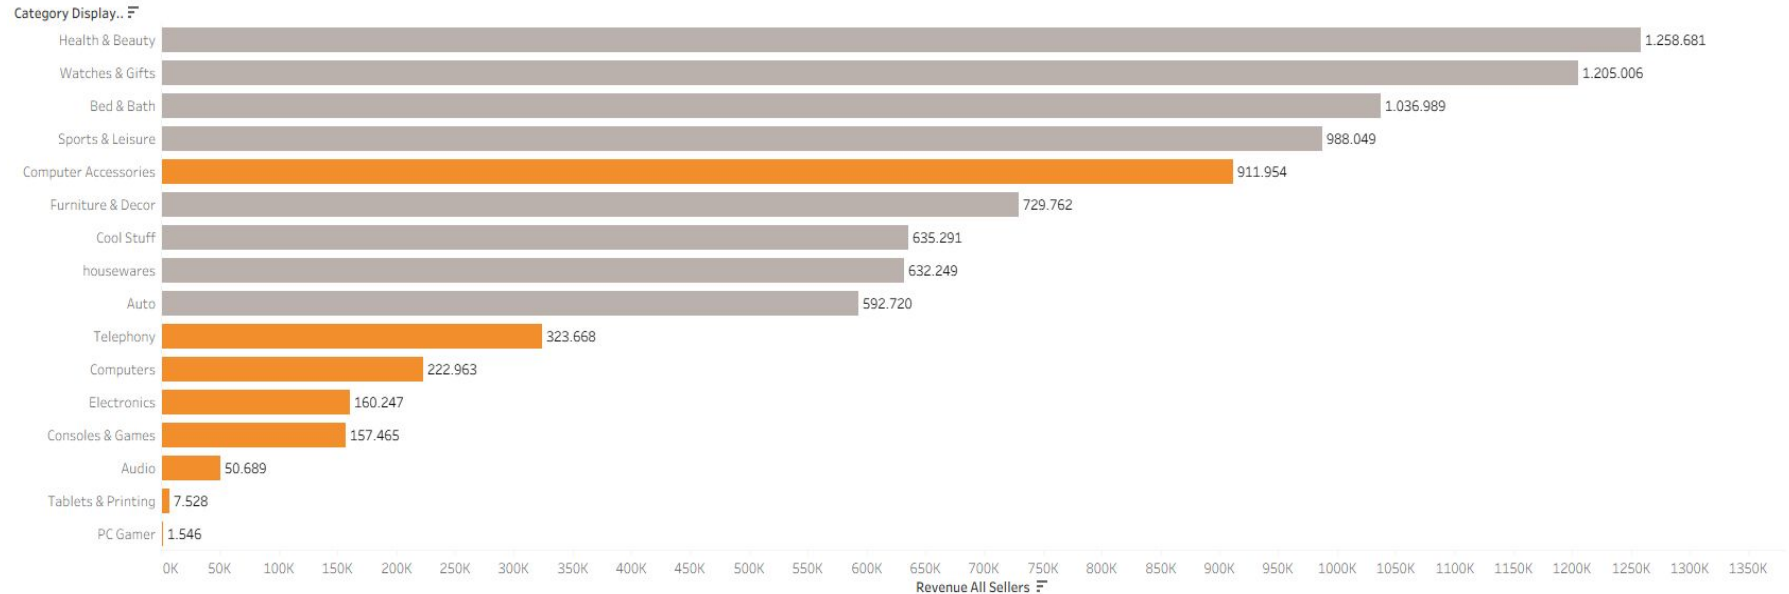

- €13.6M total revenue
- €1.84M from tech products
- 86% of revenue comes from non-tech products

Tech products contribute only 14% of total revenue

All Tech categories vs Top 8 Non-Tech Categories

Tech vs Top 8 Non-Tech Categories by Revenue

Computer Accessories is the only tech category competing with top non-tech sellers.

All other tech categories generate <50% of the revenue of the 8th-largest non-tech category.

Non-Expensive vs Expensive Categories

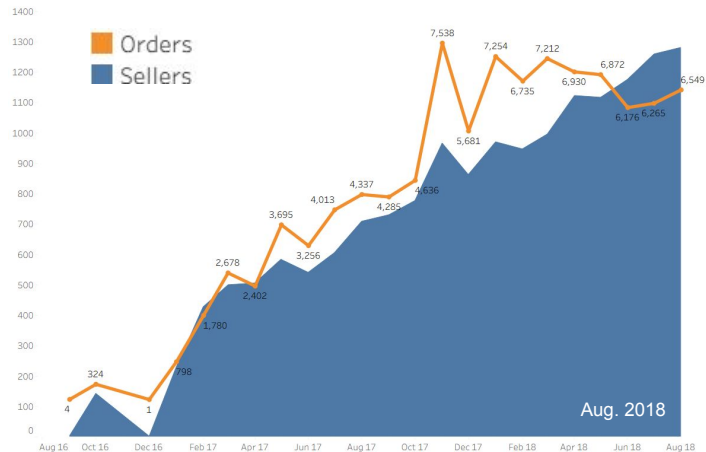

- Magist performs **well in affordable Tech**
- Expensive Tech shows significantly lower sales volume
- This may indicate a weak fit for Eniac's premium iPhone-focused portfolio
- Magist's **customer base appears more price-sensitive** than premium-oriented

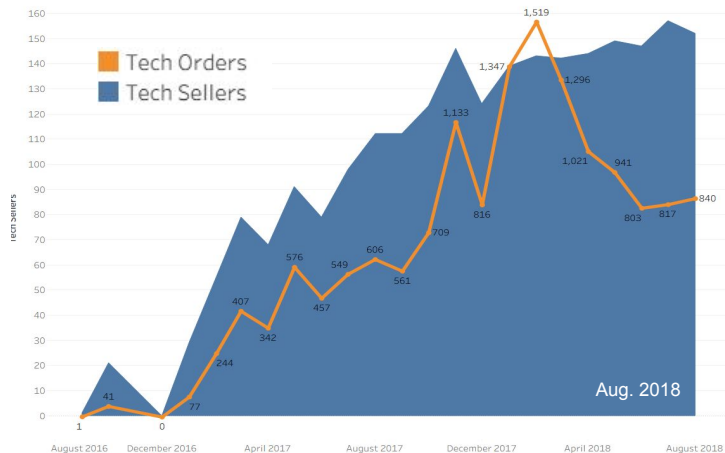

Premium Tech sells much less

This creates a potential market-fit risk for Eniac.

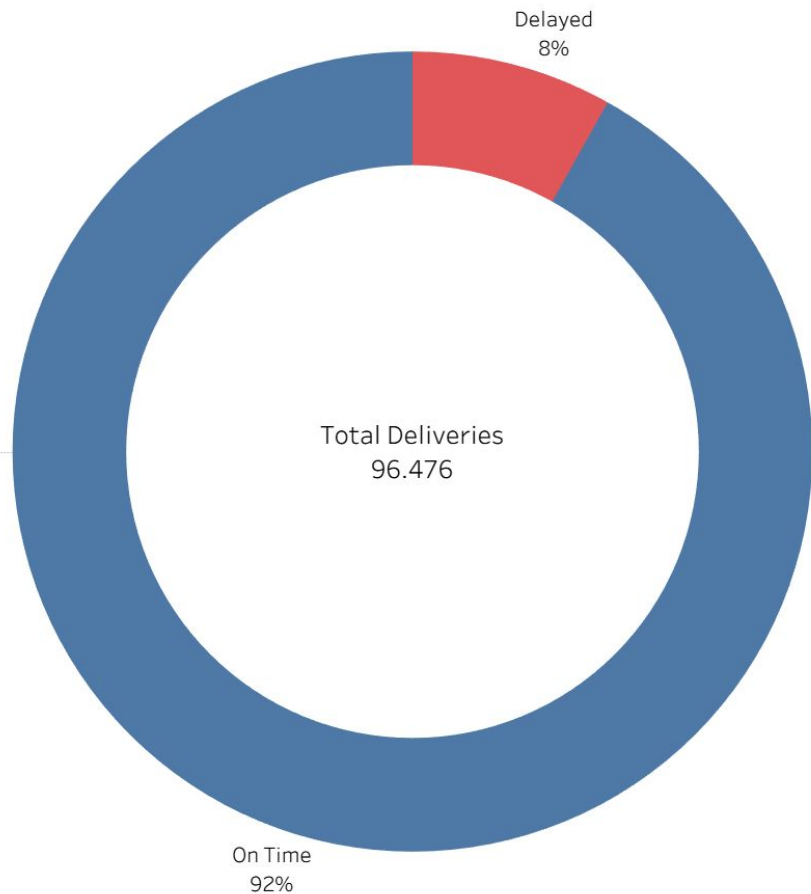

Sellers vs Orders

- Magist shows **steady increase on its seller base**
- Similar increase with total orders
- **Orders stagnating** after December 2017
- Tech sellers are growing similarly
- A **sharp drop** happening after the end of 2017 with no visible recovery
- An **imbalance between sellers and buyers** forming up
- Indicating an unhealthy competition for Eniac

Magist's growth is driven by other categories and **tech items are not a focus point** on the booming buyer base.

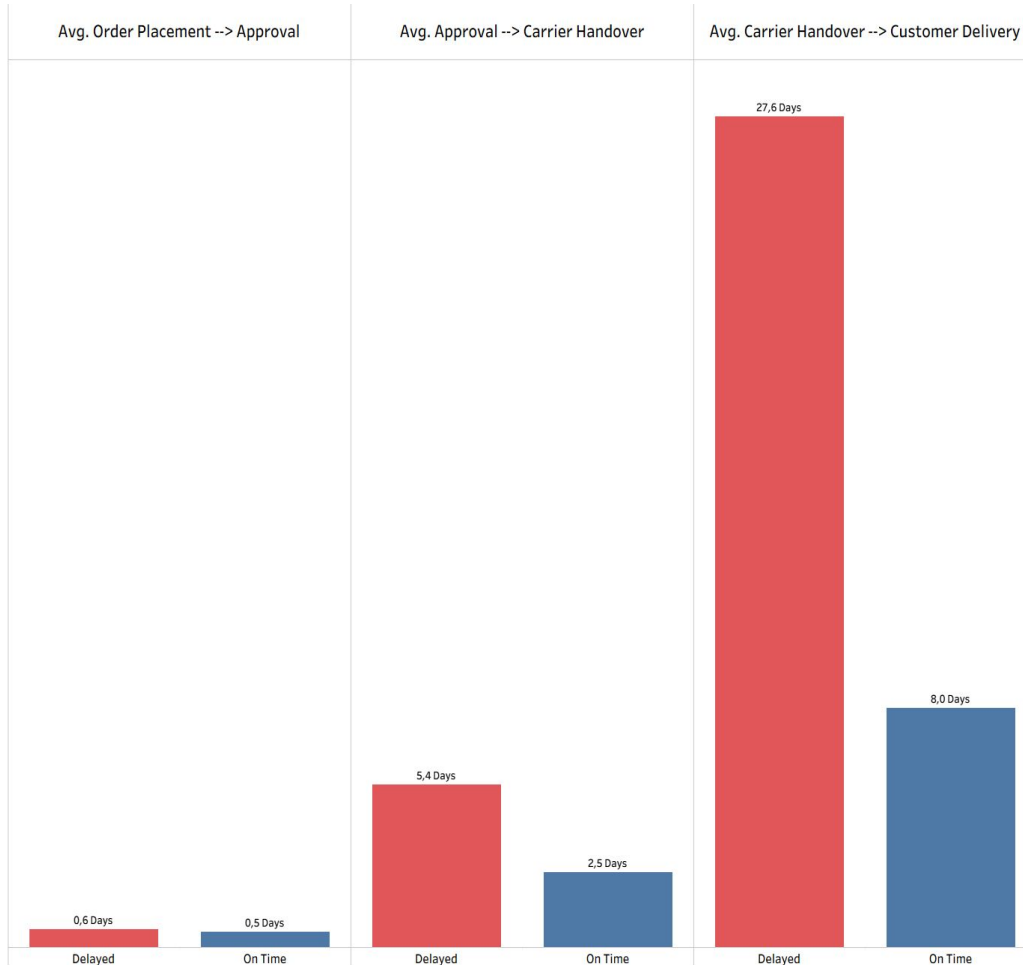

Percentage of **delayed deliveries**

- 92% on-time delivery across ~96.5K deliveries
- ~7.8k deliveries delayed, representing 8% of total

92% of deliveries arrived on time

8% deliveries are delayed

Average **delay** per Category

Two actors are major contributors to the delivery delays:

- Eniac: Delays occur when handing the customer order over to the postal service
- Postal service: Delays occur during the delivery of the order to the customer

Carrier service causes massive delays during the delivery process

Key Findings

- Tech products performed worse than other product categories in recent months
- The market for expensive tech products is relatively small
- Delivery delays are often substantial rather than marginal

Recommendation: Reassess the partnership opportunity in 6 months
